Integrating Artificial Intelligence in Elementary Education: Opportunities and Challenges

This session is designed for elementary school teachers, administrators, curriculum coordinators and other stakeholders interested in exploring the integration of Artificial Intelligence in elementary education. Participants should have a basic understanding of educational technology concepts but no prior knowledge of AI is required.

Participants will gain insights into the potential of AI to enhance elementary education, explore practical strategies for integrating AI concepts into the curriculum and identify resources and support networks for further exploration and implementation. They will leave equipped with the knowledge and tools to embark on their AI journey in education.

Presentation Target:

Elementary School

Presenter(s):

1. Natalie Hulbert, Elementary Computer Science, IT, and Technology Education Consultant, NC Department of Public Instruction
