Ensuring Students Acquire Critical Math Skills for the Rigors of STEM Vocations and Higher Education in a Digital World

Participants are to engage in discussions about how students learn, retain and apply mathematical skills in the wake of access to digital technologies that do mathematics for them. We explore ways to: 1) integrate technology without compromising the development of critical analytical skills, 2) prepare confident competent students for the rigors of problem solving; and 3) structure classroom activities successfully to benefit all students, including those who may be chronically absent from the classroom.

Presentation Target:

High School

Presenter(s):

1. Ida L. J. Pittman, Math Teacher; Guilford County Schools, Ben L. Smith High
