

Presentation Title: *What's in Your Water?! Hands-On Lessons for Safe, Lead-Free Drinking Water*

Join us for a hands-on workshop exploring how Clean Classrooms for Carolina Kids curriculum materials engage kindergarten through 12th-grade students in learning about clean, safe and lead-free drinking water. Participants will explore a flexible range of instructional materials, from short, high-impact lessons suitable for a single class period to multi-day, project-based learning units that support sustained inquiry. During the session, participants will experience sample activities and examine how lessons can be used as standalone experiences or intentionally sequenced within cohesive project-based learning units. Participants will leave with standards-aligned, ready-to-use resources and practical guidance for adapting materials to fit their instructional context.

Presentation Target:

Elementary & Middle School

Presenter(s):

1. Nicole Mills, Research Education Analyst, RTI International
2. Erica Wood, Research Environmental Scientist, RTI International
3. Whitney White, Research Education Analyst, RTI International
