Presentation Title: *The Science House Presents - Learning to Learn: The Metacognitive Classroom*

Y'all know the routine: Attend class, take notes, attempt the homework, rely on classmates or AI, cram the night before studying for the test, and then get a poor grade and exclaim, "But I spent hours studying! My teacher didn't cover any material on this test!" Possibly the teacher did a poor job covering the material, but most likely this student has not learned how to learn. Even students who do well on the test rarely remember the material a week or two later. Come learn evidence-based metacognitive strategies for teaching yourself (and others) to master any course content and become proactive learners.

Presentation Target:

Middle & High School

Presenter(s):

1. Jason Painter, Director, The Science House
